

Recommendation Letter

24th August 2016

To Whom It May Concern:

Mr Daniel Dobiński joined the Department of Electrical Engineering, The Hong Kong Polytechnic University as a trainee from 4th July 2016 to 26th August 2016 under my supervision working mainly on computer simulations of high power converters with power rating of 33 kW. He was responsible for optimizing the Full Bridge Zero Voltage Switched Phase Shifted DC-DC Converter for use in electric vehicle quick chargers.

Daniel is a fast learner who can work independently to develop and apply new technologies on challenging problems. As evidenced from his abilities to complete all the assigned tasks on time and give constructive feedback on the project, I strongly believe he has the potential to be an outstanding researcher/engineer, and would therefore have no reservation to recommend him for admission to your institution or to join your research/engineering team.

Please do not hesitate to contact me if you would like to know more about Daniel.

Your faithfully,

Dr Kevin K. W. Chan
Associate Professor and Associate Head
Department of Electrical Engineering
