Recommendation letter for Daniel Dobiński

Dear Sir or Madam,

Daniel Dobiński currently spends a traineeship at our institute, the full stay will be from Oct 1 to Dec 31, 2015. His work here focuses on the reliability of microelectronic devices in various advanced sub-micrometre technologies, especially on the degradation of MOSFET devices in integrated circuits for automotive or high-voltage applications.

I got to know Daniel Dobiński as an open-minded and highly interested person. His contributions to the working projects are particularly helpful and comprise the analysis of experimental data, the degradation simulation with numerical tools and the comparison to theoretical ageing models.

I support his decision to apply within the Erasmus Mundus programmes and recommend him without any reservation.

Sincerely,

Dr. Kay-Uwe Giering

Roland Jancke
Group leader "Reliability and Test"
